## Mission \_\_\_\_\_

Teamwork is a group of companies in Lombardy, Italy, characterized by a strong complementarity of production. The group was created with the aim of integrating the respective potentialities of its members, all united in their commitment to excellence.

Teamwork – drawing on the experience of five medium-sized companies in the engineering sector, located in close geographical proximity to each other, sharing a propensity for innovation, product quality and an ability to act in foreign markets – is a highly cohesive group the members of which are capable of working both together and independently, always upholding the highest quality standards.

Our motto is, Teamwork - Think - Develop – Solve, because we are convinced that cooperation and sharing are the right answers to the question, "How to grow?".

## What We Do \_\_\_\_\_

Teamwork is a partnership of considerable ability, size and annual revenue. These accomplishments have been achieved thanks to the daily commitment of our group's roughly 300 workers, and to the variety and complementarity of our production and processing, which follow a long and well-established tradition capable of continuously evolving in response to both technological advances and market demands.

Teamwork performs:

- Hot and cold forging parts in steel and aluminum alloys
- High precision mechanical machining of ferrous and non ferrous metals
- Springs out of wire and strips
- Hard and natural galvanizing of aluminum alloys
- Heat treatment of steel alloys
- High Pressure Die Casting and Permanent mould of aluminum alloys
- High precision machining of light metal sheets

## What We Think \_\_\_\_\_

We believe that unity represents an extraordinary driving force. We think that the sharing of skills increases people's strength and enhances their creativity.

We believe in the solid commitment, ingenuity and professionalism of several generations of change-oriented managers and experts.

Teamwork is ready for the challenge; ready for the idiosyncrasies and demands of new economic and commercial ventures abroad, while remaining true to its mission: THINK – DEVELOP – SOLVE.
